

Silver was a commonly-used antimicrobial 100 odd years ago but receded from use with the advent of antibiotics which were cheap and abundant.

In recent years however, Colloidal Silver has seen a big come back in popularity because of the problems associated with antibiotic resistant bacteria and the fact that more and more people are seeking safer and more natural alternatives.

The problem with colloidal silver however is that it obviously contains metal, and this has been a concern to many health professionals.

All this has changed with the advances in the field of silver ion technology.

Ionic Silver is rapidly making Colloidal Silver obsolete because it has all the antimicrobial properties of Colloidal Silver but without the metal.

How can you tell if there is metal in a solution?

TYNDALL TEST

Colloidal Silver
Laser beam showing evidence of metal.

HW Pure Ionic Silver
No laser beam showing no evidence of metal.

Laser pointer beam directed through both solutions.

When a laser is shone through a liquid other than distilled water, a path of light can be seen similar to when you shine a torch through smoke or fog.

All colloidal silvers will show this path of light as the laser beam refracts light off the metal particles contained within the liquid.

This test will clearly show the difference between HealthWest Pure Ionic Silver and Colloidal Silver and will demonstrate that HealthWest Pure Ionic Silver does not contain any metal, colloids or Nano-particles.

HealthWest Pure Ionic Silver is specifically designed to entirely overcome the inherent limitations of colloidal silver technology and provide a pure Silver Ion solution with a built-in delivery mechanism to shield it from chloride and other salts in the body, enabling it to be delivered intact to where it is needed.

The fact that silver ions are effective against a broad range of micro-organisms is well established and due to recent advances in the delivery of silver ions, together with the problems associated with antibiotics, are being used in a rapidly growing range of health and medical products.

HealthWest has exported its products throughout the world for over 17 years.

The response from thousands of clients and health professionals has been recognition of HealthWest products for their consistent quality and efficacy.
